FEbyoL **Dosimetry Systems**

Effective and Efficient Dosimetry Uniquely Enabled by RPL Technology

OUR PRODUCTS

Dose Ace: RPL In-Vivo **Dosimetry System for Medical Use** RPL Dosimetry System for Environmental Monitoring RPL Glass Badge Personal Dosimetry System TechnoTrak2 ■ Wide-Range Neutron Pit (WNP) System

Pioneer of RPL Dosimetry

Chiyoda Technol presents

Effective and Efficient Dosimetry - Indispensable for **Radiation Control in All Fields and for All Occasions**

- Innovative top quality radiophotoluminescence (RPL) detectors
- Unparalleled quality RPL Glass Badge dosemeters
- Accuracy far beyond any conventional film. TLD, or OSL dosemeters

We are the only provider of unparalleled top quality Glass Badge and **RPL dosemeters**

OUR **MISSION**

Radiation has two opposite, distinctive, impacts on human beings: harm and benefit. Our mission is to help guarantee the safety of this potentially harmful substance. We have over 60 years' history of developing high quality dosimetry systems and providing dosimetry services for professionals at risk of irradiation. We focus on industries including medicine, pharmaceutics, biology, engineering, and agriculture. In response to social and environmental needs, we are expanding our service to include daily radiation surveillance for non-professional populations.

The first-generation Glass Badge dosimeter Dosimetry services launched in October, 2000

The current most recent model Services started in December, 2013

Principle of Glass Badge or RPL Dosimetry

What is radiophotoluminescence (RPL)?

When silver activated phosphate glass is exposed to ionizing radiation, luminescent centers are formed in the glass. When the glass is excited by ultraviolet (UV) rays, it emits orange luminescence. This phenomenon is called radiophotoluminescence or RPL.

Measurement Principle

The luminescent center is stable, with negligible fading. The RPL intensity is proportional to the received dose; therefore, it can be used for dosimetry. In addition, unlike TLD and OSL, the luminescence is not set off with excitation, allowing

Advantages of RPL Glass Badge Dosemeter

Sensitivity variation in the glass element is minor, ensuring reliability.

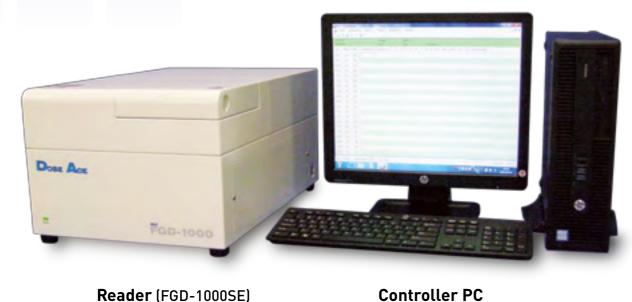

on between RPL glass pieces from different batches: 0.944%±0.036		
on between RPL glass pieces from the same batch: ±1.31%		
on: -2.7% - +2.5%		

RPL In-Vivo Dosimetry System for Medical Use

Dose Ace

An extremely miniaturized glass detector provides medical quality dose detection. Dose differences between the target and non-target sites are detected correctly even when the sites are in very close proximity.

Reader (FGD-1000SE)

Components

- Glass dosemeter element (detector)
- Reader
- Controller PC

Advantages

- The high reproducibility of DoseAce has a coefficient of variation of less than 2 percent.
- When the surface of the glass becomes dirty, it can be cleared. you can re-measure the glass element as many times as you want.

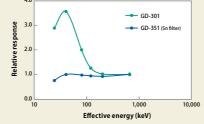

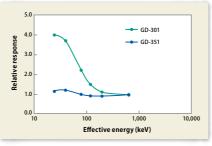

- It does not fade under fluorescent light or sun light, so you can handle the glass dosemeter under light and at
 - high temperatures. • Repeated readouts enhance measurement accuracy.
 - Homogeneous composition of PRL glass ensures stable dosimetry.
 - Automatic reading system enables immediate readout: up to 20 continuous measurements.

Energy dependence to air absorbed dose (free in air)

Energy dependence to 1cm dose equivalent (on phantomr)

Optional goods

Water-Proof Holds

Annealing Tray Mini (Mini Tray)

Applications

- Evaluation of phantom dose distribution for radiotherapy and diagnostic imaging
- Small size animal irradiation tests
- Quality assurance of photon (gamma ray and X-ray) irradiation

Users

- Radiology departments
- Phantom simulation institutions
- Animal irradiation laboratorys
- Universities
- National Research Institutes

Specifications

Glass Dosemeter element (detector)	Model & glass detector dimensions	GD-301	φ1.5×8.5 mm
		GD-302M	φ1.5×12 mm (with ID)
		GD-351	φ1.5×8.5 mm (with filter)
		GD-352M	φ1.5×12 mm (with ID and filter)
	Measuring range	Photon (gamma ray & X-ray)	
		10 µGy (Sv) to 10 Gy (Sv) [to 100 Gy (Sv) by option] 500 Gy (as a ref.level)	
Reader	Model	FGD-1000SE	
	Display value unit	Gy (Sv)	
	Display value range	1µGy (Sv) to 10 Gy (Sv) [to 500 Gy (Sv) by option]	
	Reproducibility Coeff	Coefficient of variation	5% or less (at 100 µGy)
			2% or less (at 1 mGy)
	Continuous reading	20 glass detectors	
	Read-out time	6 seconds or less / element	
	Calibration technique	Dose calibration is automatically performed with the standard irradiation glass element and the sensitivity calibration with the internal calibration glass element.	
	Power supply	100, 115, 220 & 240 AC (50/60Hz)	
	Power consumption	Max. 200 W	

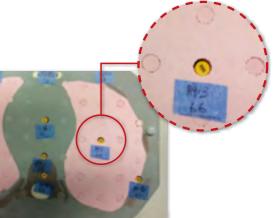

Note: Specifications are subject to change without notice for improvement.

RPL Dosimetry System for Environmental Monitoring

RPL Environmental Dosimetry System

Detector

Our environmental monitoring system features a wide RPL glass surface to support an extensive range of radiation levels of gamma rays, X-rays, and synchrotron radiation.

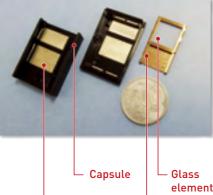

Reader (FGD-202)

Components

- Glass dosemeter element (detector)
- Reader Controller PC

Structure of SC-1 Detector

Glass ID

Sn filter

- The wide surface of our RPL glass provides accurate measurements of low to high dose ranges.
- Repeated readouts enhance measurement accuracy.
- Sensitivity variation in the glass element is minor, ensuring reliability.
- Homogeneous composition of PRL alass ensures stable dosimetry.
- sunlight, providing minimum fading.
- tates operation.

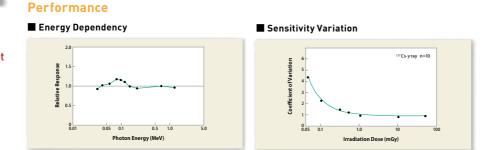

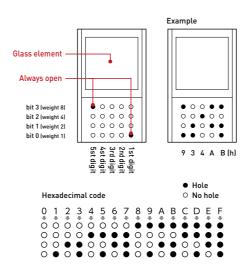

Diagram of detector ID control code system

The card number of SC-1 is expressed by a hexadecimal number. A glass card has the hole where the card number was expressed by a binary number. This is called "holecord".

Specifications

Dosemeter element	Model	SC-1		
	Measuring Range	Photon : 30 keV to 3 MeV		
		10 μGy to 10 Gy (10 μSv to 10 Sv)		
	Sensitivity Variation	Cv 4.5% or less (Cs-γ200μGy)		
	Energy Dependency	Within±20 % (32 keV to 1.25 MeV)		
	Dimension	30×40×9 mm		
	Weight	Approx. 15 g		
Reader	Model	FGD-201 / FGD-202 (* with energy estimation system)		
	Indication Range	1 μGy to 10 Gy (1 μSv to 10 Sv)		
	Reading Reproducibility	Cv	5% or less (Cs-γ0.1 mGy)	
			2% or less (Cs-γ1mGy)	
			1% or less (Cs-γ 10 mGy)	
	ID Reading	Automatic	Capsule ID : 8 digits (barcode)	
			Card No. : 20 bits (holecode)	
	Readout Time	10 seconds or less / 1 detector		
	Continuous Reading	20 dosemeters		
	Calibration	Dose calibration using standard irradiated glass		
		Automatic correction by internal calibration glass		
	Data Storage Capacity	50,000 data		
	Indicated Items	Dosemeter I D, Element I D, Date and Time, Initial reading,		
		Cumulative (period) value, Parameters, Error messages		
	Dimension (Main Unit)	400(W)×570(D)×415(H) mm		
	Weight (Main Unit)	Approx. 35 kg		

Note: Specifications are subject to change without notice for improvement

- RPL glass is resistant to dust and
- Automated readout process facili-

06

- Applications • Gamma-ray monitoring around
 - nuclear power plants. • Environmental monitoring for healthcare X-ray, radioisotope, or
 - other facilities. • Air-absorbed dose monitoring on the
 - border of controlled areas

Users

- Nuclear facilities
- Radiology department
- Research institute etc.

SC-1 is our product for monitoring accumulated air-absorbed dose around nuclear facilities. Detectors are contained in the SC-1 post and replaced every three months.

RPL Dosemeter for Individual Monitoring

Personal Dosimetry System

Institut de Radioprotection de Sûreté Nucléaire (IRSN) is providing Dose Monitoring Service in Europe using our products. Our accumulated Know-how is available through the French Institute. Chiyoda Technol also helps you to consult your needs and provides Individual Dosimetry System. Please contact us.

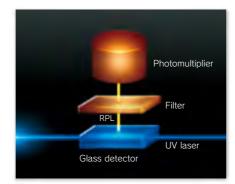

Reader (FGD-660)

Automatic Reader FGD-660

RPL is the only dosemeter with non-destructive reading center that is able to routinely take 50 measurement points per dosemeter which can be read repeatedly without fading. We associated it with RPL Dosimetry Reader (FGD-660), the read-out system for glass detector, using solid-state (UV) laser that is capable to drive continuous pulses to the ultra violet excitation source

RPL Dosemeter is the flagship among our products, resulting from our long years' research and experience.

Chiyoda Technol has been engaging in Individual dose monitoring business since 1954. At present, we operate the service with a total number of 4 million units in Japan.

Technical Benefits

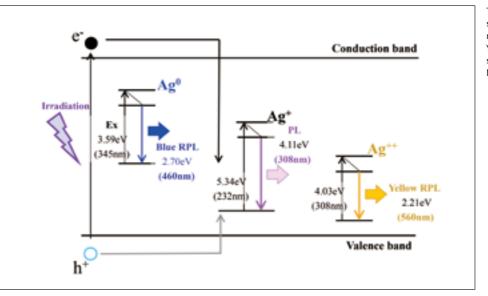

- Proven European-scale performance recognized by the major European laboratories that choose the institute's dosemeter (see intercomparison results)
- Recording threshold: 0.05 mSv
- Less than one percent of fading over a period of 12 months

Specifications

	Detected energy range (A)	Dose range (B)
Photon (X,y)	From 16 keV to 6.6 MeV	From 0.05 mSv to 10 Sv
Beta	From 100 keV to 3 MeV	From 0.05 mSv to 10 Sv

[A] These values are not operating limits but correspond to the minimum and maximum energies available in the reference facilities that conducted the tests.
[B] In laboratory conditions, the detection limit is a few µSv only.

RPL emission model of Ag⁺-doped phosphate glass.

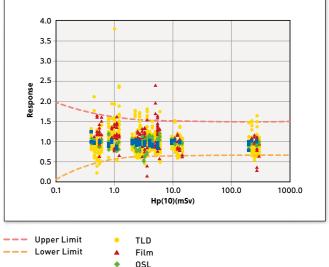

Chiyoda collaborates with the French Institut de Radioprotection et de Sureté Nucléaire (IRSN) to globally proliferate our RPL technology.

Solid-state Track Detector

TechnoTrak2

The TechnoTrak series are made from poly allyl diglycol carbonate (PADC). Our dosimetry service by using TechnoTrak1 (TT1) with pre-soaking*1 technique complies with ISO21909-1 requirements. TechnoTrak2 (TT2) provides the same performance with TT1, but without the need of pre-soaking. Furthermore, TT2's performance is the best without pre-soaking process.*2]

*1) Ohguchi, H., Oda, K., Yamauchi, T., Nakamura, T. and Maki, D. New pre-soaking technique for PADC and application to wide-range personal neutron dosimeter. Radiat. Meas. 43, S500–S503 (2008).

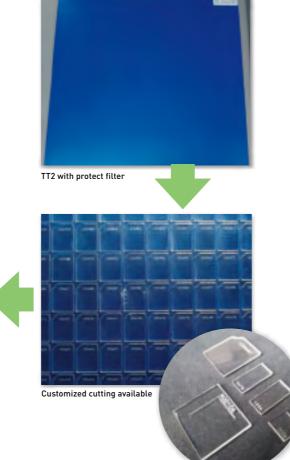

*2) Assenmacher, F., Boschung, M., Hohmann, E. and Mayer, S. Comparison of different PADC materials and etching conditions for fast neutron dosimetry. Radiat. Prot. Dosim. 170(1-4), 162-167 (2016).

Easy preparation. TT2 has high surface quality and stays constant, so that pretreatment such as pre-etching is not required.

TT2 is delivered with original aluminium bag in order to maintain quality.

Unique ID codes can be printed upon your request.

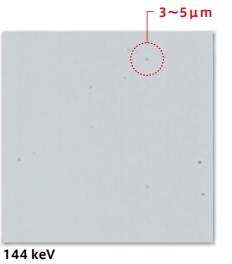

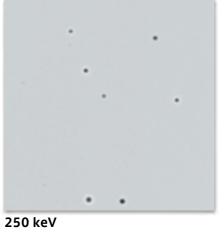

Example of binary ID code

The performance of TechnoTrak2, Solid State Nuclear Trak Detector

TT2 is developed to be used as a Solid-State Track Detector. This device detects an accumulated neutron dose. The TT2 provides highly sensitive detections of neutron with low back ground noise.

Specifications

TechnoTrak2	Sheet size	280 x 280 mm / sheet
	Thickness	0.8 mm, 1.25 mm
	Detector size	Customize cutting available
	ID engraving	digital numbers and various type of ID code is

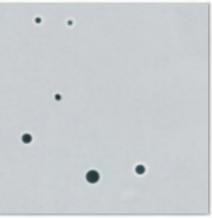

In our radiation monitoring center

Our dosemeter "Glass Badge" is composed with polyethylene radiator and boron nitride converter.

Our dosimetry service with unique processing and measurement methods meets with ISO21909-1 requirements.

Etching condition: 30 wt% KOH, 90°C, 2.5h

Neutron dosemeter for individual monitoring

Wide-range Neutron Pit (WNP) System

Wide-range Neutron Pit (WNP) is our original neutron dosemeter system. The dosemeter consists of TechnoTrak2 (TT2) detector and WNP holder. Two kinds of filters, radiator and converter are built into WNP holder, and enable to mesure wide-range energy of neutron,

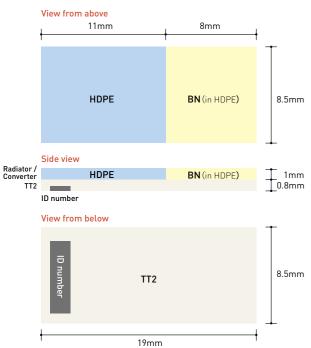

namely fast to thermal neutrons.

High Density Poly Ethylene (HDPE) and Boron Nitride (BN) are used for the radiator and converter, respectively.

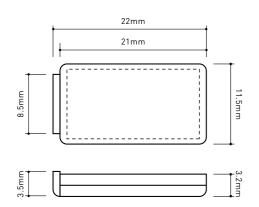

In addition, we suggest the efficient etching method and high accuracy microscope reader.

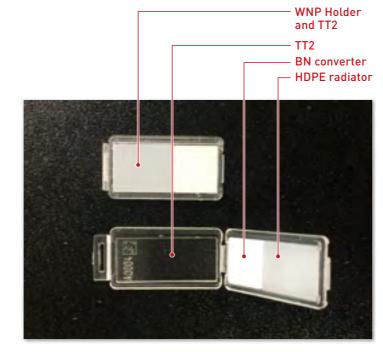

The WNP System was developed based on CTC dosimetry service which meets ISO 21909-1.

CHIYODA TECHNOL CORPORATION

We endeavor to ensure radiation safety and draw only advantages from radiation.

Chiyoda Technol Corporation is the pioneer of radiation protection and established the first radiation monitoring service using film badges in Japan in 1954. In 2000, we successfully switched from film to glass and set up the first large-scale monitoring service using glass dosemeters in the world.

Eight years later, our glass dosemeter monitoring system was introduced into the monitoring service of the Institut de Radioprotection et de Sûreté Nucléaire, France, which is one of the most authoritative radiological research institutions in Europe. This is proof of the excellent quality of our products.

Our main business

Personal Dose Monitoring Service (Radiation Monitoring Center) • We process over 380,000 RPL dosemeters called "Glass Badges" monthly

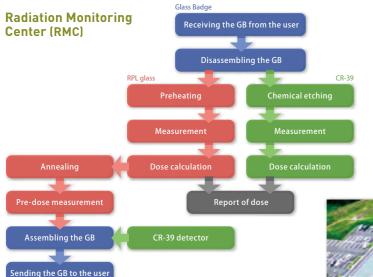

Nuclear Power Plant Support Service

- Radiation measurement system
- Protective equipment
- Environmental monitoring system
- Survey meters
- Electric personal dosemeters
- Nudear Waste related products

Supply of and Services

 Manufacture and deliver radiation sources for industrial and medical use import radiation sources

Glass Badge monitoring service process flow in RMC

Head Office

Support and Control of Radioisotope Utilization • Consulting, design and construction services for RI facilities • Environmental monitoring services

Supply of Medical Equipment • Radiotherapy equipment and QA products

Research and Development • R&D of personal dosemeters Calibration service for radiation meters

Radiation Monitoring Center (Ibara)

Oarai Research Center

Oarai Laboratory is an accredited calibration laboratory with ILAC-MRA. Our laboratory is authorized to issue a Japan Calibration Service System (JCSS) certificate that confirms the laboratory's measurements meet national measurement standards.
